**How I Learned to Stop
Worrying and Use WebAssign**

WebAssign is a web based framework for automated grading and course management. It has modules associated with various standard textbooks in mathematics, physics, chemistry and other disciplines. In particular, it has a module for our own calculus text, Stuart's Calculus.

This semester I followed in the footsteps of pioneer Jill Faudree and tried using WebAssign in conjunction with my Math 200 class. In this talk I'll report back on this experience. The talk will be very informal with lots of opportunity for questions.
